

Top Must-Have Security Tools for Every School District

Cybersecurity can be overwhelming with a so much tech. Here are the top tools every district should prioritize right now to protect student data, recommended by our Chief Security Officer.

Adam Mansour
Chief Security Officer

- 1 Endpoint Detection & Response (EDR)***
Real-time monitoring and automated responses, integrated with EDR solutions like CrowdStrike or Defender, swiftly protect critical systems such as laptops and servers by detecting and stopping sophisticated threats.
- 2 24/7 Monitoring***
Who's there to respond at 3 am? Round-the-clock cybersecurity monitoring is essential for school districts to promptly detect and respond to cyber threats.
- 3 Next-Gen Firewalls for Networks**
Using advanced security features to protect networks from complex attacks, ensure safe and open internet access for learning without needing to secure every device individually.
- 4 Email Account Security***
Combat cyber threats like phishing and malware, using anti-phishing, attachment sandboxing, and DLP to prevent malicious emails from reaching students and staff to reduce data breach risks.
- 5 Offline Backup Solutions for Data Recovery**
Keep the learning going by enabling data recovery from cyberattacks or failures, using secure, automated, and encrypted off-site backups.
- 6 Incident Response Retainer***
Get back to class faster. Enable quick identification, isolation, and mitigation of cyber threats for a rapid recovery to normal operations with recommendations to better security posture.
